                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             variation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  variation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           variation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               variation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           variation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      intron
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          exon
                                                                                                                                                                                                                                                        exon
                                                                                                                                                                                                  CDS
 The invention relates to methods for identifying several pre-selected polymorphisms present in cytochrome P450 2D6 (CYP2D6) gene. The method is useful for identifying pre-selected polymorphisms present in cytochrome P450 2D6 gene sequence, e.g., duplication, deletion, inversion, P450 2D6 gene sequence, e.g., duplication, deletion, inversion, insertion, translocation, polymorphism resulting in aberrant RNA splicing and as single mucleotide polymorphism. It is useful for selecting a charapeutic drug or its prodrug to treat a subject suffering from a charapeutic drug or its prodrug to treat a subject suffering from a disease or disorder that involves the respiratory system (cystic fibrosis, asthma, bronchitis and adult respiratory distress syndrome), disease, or dispinal muscular atrophy, autoimmune disease, Crohn's disease and spinal muscular atrophy, autoimmune disease (multiple sclerosis, psoriasis, insulin dependent diabetes mellitus, systemic lupus erythematosus and autoimmune haemolytic anaemia), neurological disorders (Alzheimer's disease, parkinson's disease and schizophrenia), various leuvaemias and ading. The present sequence is a PCR primer used for detecting human CYP2D6 gene polymorphism. This sequence is used to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ;

CYPD6 enzymes are involved in the metabolism of many different xenobiotics. Human CYP2D6 gene is located on chromosome 22. The oligonucleotides may be used as in situ hybridisation probes, in ligase-based sequenced determination, as components of diagnostic assays, as probes in sequence determination methods based on mismatches, as hybridisation-based diagnostic assays, and as components of diagnostic microarray. CYP2D6 is useful to predict variations in an individual's ability to metabolise certain drugs. The present sequence is human CYP2D6
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New sequence determination oligonucleotides, useful for detecting polymorphic stres in a 5' flanking region of a CYP2D6 gene, as hybridization probes, as components of diagnostic assays, or in ligase-based sequence determination.
                                                                                                                                                                                                                                                                                                                                                                                                                                                Human, cytochrome P450 2D6, CYP2D6, enzyme, detection, xenobiotic, ligase-based sequenced determination, drug metabolism, chromosome 22,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               exon
                                                                                                                                                                                    exon
                                                                                                                                                                                                                                                                                                                                                                                                                                                 exon
 The invention relates to an isolated nucleic acid comprising a cytochrome P450 2D6 gene variant, e.g. G5799C or C5816AT (referring to the genomic sequences). Also included are probes, primers (allele specific coligonucleotides) and arrays used to detect and or amplify the CYP2D6 gene polymorphic regions, the variant polypeptides, antibodies which are capable of distinguishing between the variant and wild-type polypeptides, artibodies which are polymorphic regions, the variant polypeptides, antibodies which are subject has a genetic deficiency for metabolising a determining whether an individual is susceptible to being a poor metaboliser of determining whether an individual is susceptible to being a poor wariant form of the CYP2D6 gene. The primer is useful for amplifying the cyaluating therapy with a drug metabolised by P450 CYP2D6 and cetermining whether a subject has a genetic deficiency for metabolising determining whether a subject has a genetic deficiency for metabolising determining the nindividual is susceptible to being a poor metaboliser of determining the nindividual is susceptible to being a poor metaboliser of determining the nindividual is susceptible to being a poor metaboliser of determining the nindividual is susceptible to being a poor metaboliser of determining the nindividual is susceptible to being a poor metaboliser of determining the nindividual is susceptible to being a poor metaboliser of determining the nindividual is susceptible to being a poor metabolising drugs. The nucleic acids are useful as genetic deficiency for metabolising drugs that are substrates of P450 CYP2D6. The methods are useful for sensitivity condition or disorder that is associated with an aberrant level of a CYP2D6 protein or an aberrant level of a CYP2D6 protein of a popropriate drugs or determining the course of treatment to administer to a subject to treat cardiovated with a drug sensitivity or disorders or conditions are useful for metabolism and allelic variant of a polymorphic region of the CYP2D6 gene individ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               /*tag= d

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           variation
     The present sequence comprises the human cytochrome P450 CYP2D6 wild-type gene. CYP2D6 polymorphisms serve as genetic markers for CYP2D6 metabolic capacity. The invention relates to the use of setrones (antiemetics) for treating and/or preventing setrone-treatable diseases in a subject having in its genome fewer than 3 copies of a polynucleotide encoding a cutofinal CYP2D6 polypeptide. The subject has at least one first variant allele selected from: CYP2D6*1, CYP2D6*4, CYP2D6*6, CYP2D6*7, CYP2D6*8, CYP2D6*1, CYP2D6*1, CYP2D6*6, CYP2D6*7, CYP2D6*8, CYP2D6*1, CYP2D6*1, CYP2D6*1, CYP2D6*2, and preferably has at least cone first variant allele selected from: CYP2D6*1, CYP2D6*6, CYP2D6*9 and CYP2D6*10. The variant allele results in altered (decreased) expression. The treatment regimen can be modified according to the genetype of the cyp2D6*1, CYP2D6*1, CYP2D6*3, and offer marked and/or first general and/or womiting secondary to cancer computed to concer computed providing nausea and/or vomiting secondary to cancer chemotherapy, radiation therapy, migraine, acetaminophen poisoning, prostacyclin therapy, and opioid treatment, spinal or epidural opioid-computed provides and/or vomiting secondary to cancer chemotherapy, radiation therapy, migraine, acetaminophen poisoning, crelated pruritius, acute levodopa-induced psychosis, bullmia nervosa, fibromyalgia, chronic fatigue syndrome, obsessive-compulsive disorders, chairled paridyne and promera, and perconders, conduction, opioid withdrawal syndrome, contracted and provides and perconders and perconde
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 .

                                                                                                                                                                                                                                                                                                                                                                                                                            This invention relates to novel primer sets that can be used to screen a polynucleotide sample to detect and identify variants in the cytochrome P450 isoenzyme 2D6 (CYP2D6) gene. The gene is located on chromosome 22q13.1 and contains several single nucleotide polymorphisms, the details of the present invention are useful for screening a polynucleotide sample to detect and identify variants in the cytochrome P450 isoenzyme 2D6 gene metabolism. The present sequence is that of the gene which encodes the wild-type human cytochrome P450 isoenzyme 2D6 gene wild-type human cytochrome P450 isoenzyme 2D6 protein and which is related to the invention. Note: This sequence contains introns, the number and location of which are not disclosed within the specification. As well as the featured SNDs, an exon 9 gene conversion is also claimed in claim 25 of the specification.
                                                                                                                                                                                                                                                                                                                                            New primer set useful for screening a polynucleotide sample to detect and identify variants in the cytochrome P450 isoenzyme 2D6 gene, and for detecting low frequency variants affecting pharmaceutical drugs
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps

```
The present invention relates to a primer set that can be used to screen a polynucleotide sample to detect and identify variants in the human cycochrome P450 isoenzyme 2D6 (CYP2D6) gene. Also disclosed is a kit for the above screening method, a method for predicting the potential for altered metabolism of a substance; including one or more than one plarmaceutical drug, by a first individual compared to a second control individual, where the substance is metabolised by the CYP2D6 isoenzyme, or purified or isolated variant of wild-type CYP2D6 isoenzyme having one or more than one of the alterations chosen from F-I at position 120, E-K at position 150, E-K at position 150, E-K at position 150, H-H at position 324, R-STOP at position 120, F-F at position 35, H-H at position 314, V-FRAMESHIFT at position 344, Y-C at position 35, H-H at position 314, V-FRAMESHIFT at position 363, E-K at position 418, H-Y at position 311, V-FRAMESHIFT at position 363, E-K at position 418, H-Y at position 311, V-FRAMESHIFT at position 363, E-K at position 418, H-Y at position 310, V-FRAMESHIFT at position 363, E-K at position 418, H-Y at position 310, V-FRAMESHIFT at position 363, E-K at position 418, H-Y at position 310, V-FRAMESHIFT at position 363, E-K at position 418, H-Y at position 310, V-FRAMESHIFT at position 363, E-K at position 418, H-Y at position 310, V-FRAMESHIFT at position 363, E-K at position 418, H-Y at position 310, V-FRAMESHIFT at position 363, E-K at position 418, H-Y at position 310, V-FRAMESHIFT at position 314, Y-C at position 418, H-Y at position 310, V-FRAMESHIFT at position 314, Y-C at position 418, H-Y at position 310, V-FRAMESHIFT at position 314, Y-C at pos
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          affect pharmaceutical drugs metabolism, thereby decreasing the false negative rate in variant screening. The present sequence represents human wild-type CYP2D6 gene. The gene maps to chromosome 22q13.1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps

The invention relates to a method of determining if an individual is predisposed to fast progression of liver fibrosis or liver cirrhosis comprising determining a presence or absence, in a homozygous or comprising determining a presence or absence, in a homozygous or heterozygous form, of at least one fast progression liver fibrosis.

CC designosting loci of the individual, where the neighboring loci is in in linkage disequilibrium with the locus, thus determining if the individual cs predisposed to fast progression of liver fibrosis; a kit to carry out the method; a method of preventing fast progression of liver fibrosis in an individual. The individual complement of fast progression of liver fibrosis in an excelerating development of fast progression of liver fibrosis in an accelerating development of fast progression of liver fibrosis in an individual. The individual is suffering from a hepatitis viral infection caused by hepatitis B, C or D virus, a hepatotoxicity (alcohol- or drug-induced), a liver cancer, a non-alcoholic fatty liver disease (NAFLD), an autoimmune disease (autoimmune hepatitis (RAH), primary biliary cirrhosis (PBC), or primary sclerosing cholangitis (PC), a metabolic liver condary involvement of the liver (celiac disease and/or a disease with secondary involvement of the liver (celiac disease and/or individual is predisposed to fast progression of liver fibrosis. The method and drug are useful for preventing liver cirrhosis and fast man location and liver fibrosis. This sequence is human cytochrome P450 2D6
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Determining if an individual is predisposed to fast progression of liver fibrosis comprises determining a presence or absence of at least one fast progression liver fibrosis-associated genotype.
                 diagnosis; prophylaxis; hepatitis B infection; hepatitis C infection; hepatitis D infection; drug-induced hepatotoxicity; liver tumor; liver cirrhosis; fibrosis; autoimmune hepatitis; primary biliary cirrhosis; primary sclerosing cholangitis; hemochromatosis; Wilson's disease; alpha-1 antitrypsin deficiency; celiac disease; amyloidosis; gastrointestinal disease; metabolic disorder; inflammatory; inflammatory; inflammatory; inflammatory; inflammatory; inflammatory; inflammatory; inflammatory; consequencessive; cytostatic; cytochrome P450 2D6; CYP2D6; ds;

The inversion relates to detecting mucleotide variants chosen iron -1584c.

G. 1846G-A, 2549A-del at polymorphic sites in the gene encoding cytochrome P450-206 (encoding debrisoquine 4-hydroxylase) comprising cytochrome P450-206 (encoding debrisoquine 4-hydroxylase) comprising cytochrome P450-206 (encoding debrisoquine 4-hydroxylase) comprising allele specific extension primers to complementary target sequence in amplified DNA products. Also included is a kit (1) for detecting the labeled extension products. Also included is a kit (1) for detecting the labeled corresponding at least two tagged allele specific extension primers, where each case of at least two tagged allele specific extension primers, where each including a 3' terminal nucleotide being either complementary to a suspected variant nucleotide being either complementary to concluding a 3' terminal nucleotide being either complementary to concresponding probe sequence, and where the two tagged allele specific extension primers are for amplifying regions of DNA containing the two corresponding probe sequence, and where the two tagged allele-specific extension primers are chosen from ABF3810-ABF3825 or a set of PCR corresponding probe sequence, and where the two tagged allele-specific extension primers are chosen from ABF3810-ABF3825 or a set of PCR corresponding the presence or absence of nucleotide variants at colonymorphic sites, appearing as ABF3820-ABF38209. The method is useful for identifying individuals who may have drug metabolism defects and a multiplex method for detecting multiple mutations located in the concluding CYP2D6. The present sequence represents the Human CYP2D6 cance which islocated in chromosome 22q13.1. NOTE: It is not possible to determine the position of the SNPs within this gene since the authors of the present sequence represents the them of the earth of the snew within this gene enceding CYP2D6. The invention relates to detecting nucleotide variants chosen from -1584C Detecting nucleotide variants e.g. 1846G-A at polymorphic sites in gene encoding cytochrome P450-2D6, by amplifying DNA variants, hybridizing tagged extension primers to amplified DNA and to probes, detecting reference the positions to the ATG start codon (e.g. -1584) with indicating where the start codon is within the present sequence. The invention relates to an isolated nucleic acid comprising a cytochrome PASO 2D6 gene variant, e.g. G5799C or C5816AT (referring to the genomic sequence or the same variant nucleotide in the corresponding cDNA sequence of the same variant nucleotide in the corresponding cDNA sequence or the same variant nucleotide in the corresponding cDNA sequence of the included are probes, primers (allele specific oligonucleotides) and arrays used to detect and or amplify the CYP2D6 or capable of distinguishing between the variant and wild-type polypeptides, determining whether a subject has a genetic deficiency for metabolising a determining whether an individual is susceptible to being a poor cariant form of the CYP2D6 gene. The primer is useful for amplifying the capable of the CSB1GFA allele specific nucleotide is useful for the determining whether a subject has a genetic deficiency for metabolising a determining whether a subject has a genetic deficiency for metaboliser of drugs. The nucleic acids are useful as probes or primers for determining whether a subject has a genetic deficiency for metaboliser of drugs. The nucleic acids are useful as probes or primers for determining whether a subject has a genetic deficiency for metaboliser of drugs. The nucleic acids are useful as probes or primers for determining whether a subject has a genetic deficiency for metaboliser of drugs that are substrates of PASO CYP2D6. The methods are useful for determining if a subject has a genetic deficiency for metaboliser of drugs that are substrates of PASO CYP2D6. The methods activity, e.g. an aberrant level of a CYP2D6 protein or an aberrant correct cardiovasculate level of a CYP2D6 protein or an aberrant of a polymorphic region of the CYP2D6 gene. The artifold as are useful for monitoring CYP2D6 protein levels in an antibodies are useful for monitoring CYP2D6 protein levels in an aberrant capable or a subject has a disperence of the antibodies are useful for monitoring CYP2D6 protein levels in an aberrant capable or a subject has a g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ADX00827;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                6434
```

RESULT 13

```
The invention relates to a polynucleotide (I) of molecular variants of CYP2D6 gene, chosen from polynucleotide capable of hybridizing to CYP2D6 gene, where the polynucleotide consists of substitution of one or more uncleotides at posliton corresponding to 4784, 4735 or 4887 of the CYP2D6 gene, where the polynucleotide consists of substitution of the CYP2D6 gene having a fully defined sequence (S1) of $660 base pairs as given in the specification. (I) is useful for identifying a diagnostic composition, which involves (a) isolating (I) from several subgroups of individuals, where one subgroup has no prevalence for CYP2D6 associated disease, and one or more further subgroup(s) do have prevalence for a CYP2D6 associated disease, and (D) identifying a single nucleotide of cypunorphism by comparing the nucleic acid sequence of the polynucleotide or the gene of one subgroup having no prevalence for a CYP2D6 associated disease. (I) is useful for diagnosing a prevalence for a cyp2D6 associated disease. (I) is useful for diagnosing a prevalence of comparing the nucleic acid sequence of the polynucleotide or comparing the nucleic acid sequence of (I) in a subpect which involves determining whether a subject has compared to the presence of an observation, non-response, insufficient response, or reduced metabolic activity of CYP2D6 or treatment with a CYP2D6 gene in a subject suffering from a CYP2D6 substrate treatable disease for treatment with a cyp2D6 gene in a subject suffering from a CYP2D6 gene with several immobilized subject suffering from a CYP2D6 gene with several immobilized targets on (I) is useful for determining the binding of the polynucleotide or the disease. (I) is useful in a useful in a useful subject of the variant polynucleotide or the disease. The disease is cochine dependence, depression, hepatitis C, gene to the immobilized targets on (IV), where the binding individual's genetic constitution of the cyp2D6 gene to the disease is cochine dependence, depression of an individual with an established drug 
                                                                                                                                                                                                                                                                                             Novel polynucleotide of molecular variants of Cytochrome P450 2D6 (CYP2D6) gene, capable of hybridizing to CYP2D6 gene, is useful in diagnosing disease related to presence of molecular variant of CYP2D6
                                                                                                                                                                                                                                                                                                                                                                                                     Claim 1; SEQ ID NO 4; 33pp; English.
                                                                                                   05-AUG-2003; 2003US-00635780.

```
The invention relates to a method of determining if an individual is predisposed to fast progression of liver fibrosis or liver cirrhosis comprising determining a presence or absence, in a homozygous or heterozygous form, of at least one fast progression liver fibrosis.

CC comprising determining a presence or absence, in a homozygous or heterozygous form, of at least one fast progression liver fibrosis.

CC sasociated genotype in the CYP2D6, CYP3A5, CYP2B1, or APO E locus or in neighboring loci of the individual, where the neighboring loci is in linkage disequilibrium with the locus, thus determining if the individual is predisposed to fast progression of liver fibrosis in an exthod of determining if a drug molecule is capable of inducing or accelerating development of fast progression of liver fibrosis in an individual, The individual is suffering from a hepatitis viral infection caused by hepatitis b. C or D virus, a hepatotoxicity (alcohol or drug-induced), a liver cancer, a non-alcoholic fatty liver disease (NAFLD), an autoimmune disease (autoimmune hepatitis (AIH), primary biliary cirrhosis contoinmune disease with secondary involvement of the liver (celiac disease and/or adisease with secondary involvement of the liver (celiac disease and/or anyloidosis). The method and kit are useful for determining if an individual is predisposed to fast progression of liver fibrosis and fast contoined and drug are useful for preventing liver cirrhosis and fast contoined and drug are useful for preventing liver cirrhosis and fast contoined and drug are useful for preventing liver cirrhosis and fast liver cirrhosis liver librosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Determining if an individual is predisposed to fast progression of liver fibrosis comprises determining a presence or absence of at least one fast progression liver fibrosis-associated genotype.
                                                                                                                                                                                                               diagnosis, prophylaxis, hepatitis B infection, hepatitis C infection, hepatitis D infection, drug-induced hepatotoxicity; liver tumor; liver cirrhosis, fibrosis, autoimmune hepatitis, primary biliary cirrhosis, primary sclerosing cholangitis; hemochromatosis, Wilson's disease; alpha-1 antitrypsin deficiency; celiac disease; amyloidosis; gastrointestinal disease; metabolic disorder, inflammation, cardiant, antinflammatory; hepatotropic, virucide; gastrointestinal-gen.; metabolic; immunosuppressive; cytostatic; cytochrome P450 2D6; CYP2D6; ds.

The present sequence comprises the human cytochrome P450 CYP2D6 gene. The invention relates to the use of setrones (antiemetics) for treating and/or preventing setrone-treatable diseases in a subject having in its genome fewer than 3 copies of a polyuncleotide encoding a functional CYP2D6 polypeptide can be determined by determining the present sequence in the genome of the subject.

CONSEQUENTIAL SUBJECT HAVING IN ITS GENOME FEWER THAN 3 copies of a polyuncleotide encoding a functional CYP2D6 polypeptide is lacking the present sequence in the genome fewer than 3 copies of a consequence of the present sequence in the genome. The treatment regimen can be modified according to the genotype of the subject's CYP2D6 and/or HTR3B gene. Non-responders to antiemetic therapy can be identified on a pharmacogenetic basis, allowing a suitable therapy to be selected. The setrone-treatable diseases are postoperative nausea and/or vomiting, or nausea and/or vomiting secondary to cancer chemotherapy, radiation therapy, migraine, accetaminophen poisoning, prostacyclin therapy, and opioid treatment, spinal or epidural opioid-related prunitus, acute levodopa-induced psychosis, bullimia nervosa, fibromyalgia, chronic farigue syndrome, obsessive computies, disorders, schizophenia, alcoholism, cocalne addiction, opioid withdrawal syndrome, drug withdrawal phenomena, anxiety disorders, cognitive disturbances, neuroleptic-induced tardive.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Use of setrones for preparing a pharmaceutical composition for treating or preventing setrone-treatable diseases in a subject having in its genome less than three copies of a polynucleotide encoding a functional CYP2D6 polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                dyskinesia, Tourette's syndrome, migraine headache or gastrointestinal motility disorder (all claimed).

The present invention relates to novel DNA and protein sequences which are associated with carcinomas. The sequences are useful for: (i) for screening drug candidates; (ii) for screening of bloactive agent capable of bloactive agent capable of bloactive agent capable of modulating the activity of CAP; (iii) for screening of a bloactive agent capable of modulating the activity of CAP; (iv) for carcinoma; (vi) for inhibiting the activity of CAP; (vii) for diagnosing carcinoma; (vii) for neutralizing the effect of CAP; (vii) for treating carcinoma; (viii) for neutralizing the effect of CAP; (vii) for determing CAP; (viii) for treating carcinoma; (viii) for neutralizing the effect of CAP; (vii) for determining Carcinoma are a propensity to carcinoma; and (xi) for determining Carcinoma and (xi) for determining Carcinoma and (xi) for determining Carcinoma and CAP; (xi) gene copy number. In addition, the carcinoma including lymphoma. The present sequence is one such CA coding carcinoma including lymphoma. The present sequence is one such CA coding USC USC USC 182586A1, for which no sequence data was published
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Recombinant nucleic acid useful for diagnosis and treatment of carcinoma comprises a nucleotide sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 181684 BP; 55185 A; 34753 C; 35001 G; 55847 T; 0 U; 898 Other;

Sequence 113609, Application US/10027632
Publication No. US20020198371A1
GENERAL INFORMATION:
APPLICANT: Wang, David G.
TITLE OF INVENTION: Identification and Mapping of Single Nucleotide
TITLE OF INVENTION: Polymorphisms in the Human Genome
FILE REFERENCE: 108827.129
CURRENT APPLICATION NUMBER: US/10/027,632
CURRENT FILING DATE: 2002-04-30
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              g

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Description

Sequence 47510. Application US/09949016

Sequence 47510. Application US/09949016

Patent No. 6812339

GENERAL INFORMATION:
PAPLICANT: VENTER, J. Craig et al.
TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED

TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF

FILE REFERENCE: CLOOL307

CURRENT APPLICATION NUMBER: 60/241,755

PRIOR FILING DATE: 2000-10-20

PRIOR FILING DATE: 2000-10-03

PRIOR FILING DATE: 2000-10-03

PRIOR FILING DATE: 2000-0-08

NUMBER OF SEQ ID NOS: 207012

SOFTWARE: FASLESQ for Windows Version 4.0

SEQ ID NO 47510

TYPE: DNA
                                                                                                                                                                                                                                                                            Sequence 47509, Application US/09949016

Sequence 47509, Application US/09949016

GENERAL INFORMATION:

APPLICANT: VENTER, J. Craig et al.

TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED

TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF;
FILE REFERENCE: CLOO1307

CURRENT APPLICATION NUMBER: US/09/949,016

CURRENT PILING DATE: 2000-10-14

PRIOR FILING DATE: 2000-10-20

PRIOR FILING DATE: 2000-10-03

PRIOR DATE: 2000-10-03

PRIOR PRIOR DATE: 2000-10-03

It currently consists of 33 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

It currently consists of 9 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

       On Feb 3, 2000 this sequence version replaced gi:6742894.

NOTE: This is a "working draft" sequence. It currently consists of 15 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Length 178274;
